

## Discontinuing Your Infusion

### Getting Ready

1. Wash your hands.
2. Assemble supplies on a clean dry surface.
  - Alcohol wipes
  - Normal Saline prefilled syringe 10 mLs
  - Heparin prefilled syringe
  - Two inch paper tape

### Discontinuing Your Infusion

1. Wash your hands.
2. Clamp catheter.
3. Turn off the Infusion Pump.
4. Shut off the infusion by rolling IV tubing clamp all the way down into the off position.
5. Carefully remove IV tubing from the catheter.
6. Tape injection cap to the catheter.
7. Clean injection cap with alcohol swab.
8. Carefully insert a 5 mL syringe filled with Saline or Heparin into injection cap.
9. Inject \_\_\_ milliliters of Saline or Heparin flush.
10. Tape catheter onto your chest to keep it from pulling out.
11. Record amount of TPN solution left in the bag on your Record Sheet.
12. Check catheter dressing. Make sure it is clean, dry and intact. Have visiting nurse change dressing if necessary.
